

Carl Starvaggi

Systems Engineer 2 at Arcfield

Welcome to my portfolio! I'm originally from Frederick MD, and was homeschooled from 1st grade through graduating high school. I attended West Virginia University (Go Mountaineers!) for undergrad, and graduated in December 2023 with two bachelor's degrees, one in mechanical engineering and one in aerospace engineering.

I'm currently based in Leesburg VA and work full time in Chantilly as a Systems Engineering Technical Assistant (SETA) for Arcfield, a government contractor. A lot of my work is classified, so unfortunately I can't share much in that regard.

In my spare time, I enjoy swimming, outdoor activities, volunteering, mission work, reading, scoring music, and discussing theology with my friends. For me, every challenge is a new opportunity to both test my limits as an engineer and bring about the greatest good.

Projects

Module 1 Assignment: Personal Website

I created this website using Flask, a framework that allows the user to build web apps with Python. The site is structured using a combination of static and dynamic HTML objects bound together with a blueprint routing script. The HTML scripts are formatted utilizing a custom styling CSS, and all functions/major elements are commented for clarity.
